

Define Problem Statements (Customer Problem Statement)

Date:	3 October 2026	Team ID:	unm1611MADHANRAJ
Project Name:	AI FitTrack API	Maximum Marks:	3 Marks

Customer Problem Statement Framework:

A well-articulated customer problem statement allows the team to pinpoint exact challenges faced by fitness enthusiasts, coaches, and mobile developers. Throughout this process, we empathize with users who need automated, intelligent workout guidance without tedious manual tracking or rigid commercial paywalls.

I am	I'm trying to	But	Because	Which makes me feel
Fitness Enthusiast & Active Individual Personal Trainer & Health App Dev	Log daily workouts, track burned calories & receive tailored AI fitness guidance	Manual logs lack insight & commercial apps lack clean developer-friendly REST APIs	Existing fitness apps are locked behind paywalls & lack customizable Gen AI endpoints	Frustrated & eager for a turnkey, intelligent AI FitTrack API solution

Structured Problem Statements:

PS No.	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	Fitness Enthusiast / Active Individual	Log daily exercises and receive tailored workout recommendations	Commercial fitness apps offer generic, one-size-fits-all routines without intelligent context	Fixed templates fail to adapt to individual fitness levels, goals, and recent activity logs	Frustrated and struggling to find personalized workout guidance
PS-2	Mobile / Web App Developer	Integrate intelligent workout tracking and AI fitness routines into health apps	Building fitness tracking APIs with LLM prompt pipelines, JWT auth, and database persistence from scratch is time-consuming	Lack of turnkey REST APIs providing both standard workout CRUD and AI workout generation	Overwhelmed by complex LLM integrations and eager for a clean REST API
PS-3	Personal Fitness Trainer / Coach	Analyze client workout history and generate progress insights to evaluate performance	Manually reviewing workout logs, calorie burn totals, and duration trends is tedious	Manual analysis is slow and error-prone across multiple clients	Seeking automated AI-powered fitness insights to highlight trends and recommend adjustments
