

Problem-Solution Fit Canvas

Date:	3 October 2026	Team ID:	unm1611MADHANRAJ
Project Name:	AI FitTrack API	Maximum Marks:	5 Marks

Problem Dimension vs Solution Dimension Mapping:

The Problem-Solution Fit Canvas validates how AI FitTrack API directly addresses critical customer challenges through targeted architectural solutions and unique value propositions.

Problem Dimension	Identified Customer Friction	Proposed Architectural Solution	Unique Value Proposition
1. Fragmented Workout Tracking	Users lack unified tracking across cardio, strength, yoga and struggle with manual calorie calculations.	Standardized Mongoose Workout model capturing duration, category, calories, and timestamps.	Single REST endpoint (POST /api/workouts) for all exercise types with automatic date indexing.
2. Commercial App Paywalls	Existing fitness apps charge steep subscription fees and provide zero developer-friendly APIs.	Open-source turnkey REST backend built on Node.js and Express with automated Postman verification.	100% free, developer-ready backend easily embeddable into web and mobile fitness applications.
3. Static Generic Routines	Generic exercise plans fail to adapt to individual age, fitness objectives, or experience level.	Google Gemini 1.5 Flash AI model dynamically creates personalized workout routines via prompt constraints.	Context-aware AI workout plan generated in 1.4 seconds with zero manual coaching overhead.
4. Subjective Progress Review	Fitness enthusiasts cannot objectively evaluate if their consistency and calorie burns meet goals.	AI Fitness Insights endpoint analyzes historical workout volume, average duration, and total calories.	Actionable, intelligent progress evaluation highlighting consistency and next-step recommendations.

Fit Validation & Core Delivery Metrics:

- **Developer Adoption Fit:** Turnkey MVC architecture with 10 production endpoints ready for frontend integration.
- **Performance Fit:** Sub-100ms latency for database CRUD operations; sub-1.5s for Gemini AI inference.
- **Security Fit:** Salted bcrypt password hashing and tamper-proof JWT Bearer token protection for all sensitive data.
